Foundation Session 1: Functional Identity Mapping Summary

Functional Identity Mapping Complete

Completed 16 days ago

Primary Function

Operations

Secondary Function

Product

Functional Split

80% Primary

20% Secondary

Key Insights

- COO-level efficiency outcome confirmed with 'Yes 100%'
- Operations mechanism: 'Figuring out how to build it efficiently'
- Operations validation: colleagues seek them for 'solutions to problems' and 'how to make systems more efficient/reliable'
- Clear transition aspiration: Operations → Product
- Product mechanism interest: 'Setting the product vision and roadmap'
- Bridging experience confirmed: 'I currently do participate in the feature prioritization and product strategy discussions'
- User acknowledged the Operations primary / Product secondary positioning

Confidence Level

90/10

Foundation Session 2: Professional Credibility Assessment Summary

Professional Credibility Assessment Complete

Completed 16 days ago

Credibility Tier

Tier 2 / 5

Brand Claim

"Product professional who builds AI-powered automation solutions and user-focused platforms that drive measurable cost savings and revenue growth"

Check-Worthy Reason

Proven ability to identify efficiency opportunities and build AI-powered products that deliver quantifiable ROI through both cost savings and direct revenue generation across multiple contexts

Proof Points

1. Developed OCR-NLP AI pipeline processing 160-200 documents daily, reducing processing time from 4-6 hours to under 1 hour per document and saving ~$10,000 monthly
2. Created personal brand-building platform that acquired 1,000 users in first month with $5-15 revenue per user after validating through beta testing
3. Implements data-driven prioritization framework balancing business impact (cost/revenue) and user adoption based on survey validation

Next Steps

- Document full lifecycle metrics for both products (retention, long-term revenue)
- Quantify the exact implementation costs vs. returns to show ROI ratios
- Develop a case study showing specific prioritization process with examples of decisions that paid off

Foundation Session 3: Positioning Story Development Summary

Positioning Story Development Complete

Completed 16 days ago

Signature Story: How I Turned a $90-per-Document OCR Process into a $2 Solution

Context

Document processing required 5-6 hours of manual work, creating bottlenecks and high labor costs for the business.

Challenge

Initial implementation of AI processing was prohibitively expensive at $90/document, threatening project viability.

Approach

Leveraged AWS Cloud architecture (Textract, Bedrock, Lambda) with standardized

Outcome

Reduced processing costs by 98% (from $90 to under $2), cut processing time from 5-6

components for maintainability and scalability, pivoted to integrate Claude for pre-processing

hours to under 1 hour, and saved approximately $10,000 monthly while enabling one person to do the work of 5-6 people.

Repeatability

Now approaches all architecture decisions with business impact and manual effort reduction as primary considerations

Content Angles

- Why Standardization Beats Custom Solutions in Enterprise AI: A Cost Study
- The Hidden Costs of OCR/NLP Pipelines and How to Optimize Them
- Scaling AI Solutions: When to Use Pre-built Services vs. Custom Development
- How I Reduced Document Processing Costs by 98% Using Claude Pre-processing
- Beyond Technical Architecture: Measuring Business Impact in Software Design

Methodology

Prioritizing standardized cloud-native components over custom solutions to ensure scalability and long-term maintainability with a focus on business impact metrics.

Enhancement Modules

Optional advanced modules for specialized professional growth

Module A: Digital Behavior & LinkedIn Content Strategy

Digital Behavior & LinkedIn Strategy Complete

Completed 15 days ago

Brand Claim

"Software architect specializing in AI workflows for healthcare, enabling medical professionals to deliver optimal patient care"

LinkedIn Profile Optimization

LinkedIn Profile Optimization

Headline

Senior SWE — US HealthTech | Java + Angular • AI/ML Pipelines • AWS | Scaled to 10k+ concurrent users

Profile Score

8/10

Key Improvements

- Highlight AI expertise more prominently in headline
- Give OCR-NLP healthcare pipeline more emphasis in summary
- Ensure AI Workflows and Healthcare Technology are prominent in skills section

Featured Article Ideas

- OCR-NLP Pipeline for Patient Chart Analysis - Technical implementation showcasing real healthcare workflow solution
- Current Limitations of AI in Healthcare - Practitioner's view on realistic AI implementation challenges

Content Strategy

Natural Formats

- Comments on thought leader posts
- Sharing industry articles with brief perspective

Behavior Change

Minimal Viable Visibility Plan focusing on low-pressure engagement through comments and reactions

Action Plan

- [x] Week 1: Update headline, follow thought leaders, comment on healthcare AI post
- [x] Week 2: React to network updates, comment on technical posts, update skills section
- [x] Week 3: Share industry article, comment on healthcare technology challenges, connect with new professionals
- [x] Week 4: React to posts, comment on AI limitations, review activity and plan next month

Success Metrics

- Increased profile views
- Connection requests from relevant professionals
- Engagement on comments
- Direct messages about expertise

Module B: Network Position Mapping

Module B : Network Position Mapping

Network Position Mapping Complete

Completed 11 days ago

Value Proposition

Software architect who designed an OCR-NLP AI pipeline product which saved thousands of dollars for the company.

Tier 1 Targets

- Simon Osborne at OkkoHealth
- Lawrie Clark at Cerner
- Ross Baily at Oracle Health

Tier 2 Targets

- Product VPs
- Innovation Directors at healthcare companies

30-Day Action Plan

1. Week 1: Audit & Identify - Categorize existing connections by role and influence tier, create a focused list of top 10 targets
2. Week 2: Engage & Add Value - Follow target companies/individuals, comment thoughtfully on 3-5 posts daily, share 2 relevant articles weekly
3. Week 3: Connect & Initiate - Send personalized connection requests to 5 targets using template
4. Week 4: Activate & Create Value - Post first original content piece, respond to all engagement within 24 hours, follow up with new connections

Module C : Career Aspiration Alignment

Career Aspiration Alignment Complete

Completed 11 days ago

Target Role

Architectural leadership with broader system impact and cross-product technology guidance in healthtech

Advancement Tier

Tier 1

Current Positioning

Software Architect in healthtech with 7+ years of experience at Cooey Health, with proven experience scaling systems to 10,000+ users, leading multiple product lines, integrating AI and EHR systems, and delivering significant cost savings.

25-Year Aspiration Narrative

Someone who built products which actually affected the lives of real people and not just in numbers. Mostly in healthtech, so that people lives could improve.

Experience Gaps

- Enterprise-scale architecture experience
- Strategic decision-making authority

Career Pathway

Immediate Step (6-12 months)

Principal Architect or Lead Architect at Cooey Health with expanded scope to include architectural governance across all product lines with added competency in formalized technology decision authority and strategic input

Intermediate Step (2-3 years)

Director of Architecture or Chief Architect at a mid-size healthtech company with added competency in enterprise-wide architecture standards and strategic technology roadmap ownership

Ultimate Goal (5+ years)

VP of Engineering/Architecture or CTO at a healthtech company with multiple product lines making measurable impact on patient outcomes with executive-level influence on product-technology alignment

30-Day Action Plan

1. Document 2-3 case studies of how architecture decisions led to measurable impact
2. Identify key stakeholders across product lines who need to recognize architectural guidance
